Coffee Shop

Understanding the Problem

The goal is to make a coffe shop kiosk that both customers and employees can use. Employees can use the kiosk to change the menu and prices, and to see the orders that have been placed, and revenue.

Customers can use the kiosk to place orders, and to see the menu and prices. When viewing the menu you can search / sort by price, name, and category. Everyone can view the menu, address, and phone number.

Devising a

```
Load menu from file
Load orders from file
Load revenue from file
```

```
If Employee
    1. View shop revenue:
        Print revenue

    2. View orders:
        Print orders

    3. Add an item to coffee menu:
        Ask for name
        Ask for price
        Ask for category
        Add item to menu
        Write to file

    4. Remove an item from coffee menu:
        Ask for name
        Remove item from menu
        Write to file

    5. View coffee menu:
        Print menu

    6. View address:
        Print address

    7. View phone number:
        Print phone number

    8. Exit:
        Exit
```

```
If Customer
    1. View coffee menu:
        Print menu

    2. Search by price:
        Ask for price
        Print menu items with price less than or equal to input

    3. Search by coffee name:
        Ask for name
        Print menu items with name equal to input

    4. Place an order:
        Ask for name
        Ask for quantity
        Add order to orders
        Write to file

    5. View address:
        Print address

    6. View phone:

    7. Exit:
        Exit
```

Testing the Program

Login Input	Expected Result
User Input: Employee / E	Employee Options
User Input: Customer / C	Customer Options
--- Invalid Input ---	
Login Input: 9	Invalid Input / Ask for new input
Login Input: A	Invalid Input / Ask for new input
Login Input: Mr Boss Man	Invalid Input / Ask for new input

Employee Input	Expected Result
User Input: 1	Print revenue
User Input: 2	Print orders
User Input: 3	Ask for name, price, category, add item to menu
User Input: 4	Ask for name, remove item from menu
User Input: 5	Print menu
User Input: 6	Print address
User Input: 7	Print phone number
User Input: 8	Exit

--- Invalid Input ---

Employee Input	Expected Result
User Input: 9	Invalid Input / Ask for new input
User Input: 0	Invalid Input / Ask for new input
User Input: -1	Invalid Input / Ask for new input

Customer Input	Expected Result
User Input: 1	Print menu
User Input: 2	Ask for price and print menu items with price less than or equal to input
User Input: 3	Ask for name and print menu items with name equal to input
User Input: 4	Ask for name and quantity and add order to orders
User Input: 5	Print address
User Input: 6	Print phone number
User Input: 7	Exit
--- Invalid Input ---	
User Input: 9	Invalid Input / Ask for new input
User Input: 0	Invalid Input / Ask for new input
User Input: -1	Invalid Input / Ask for new input
Place Order: Item not in menu	Invalid Input / Ask for new input
Place Order: Quantity not a number	Invalid Input / Ask for new input
Place Order: Quantity less than 1	Invalid Input / Ask for new input
